

# Clark County

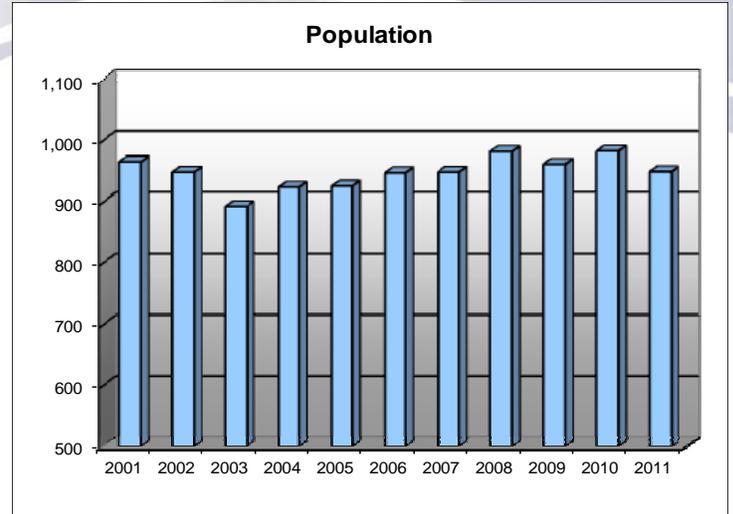

August 2012

## Work Force Trends

### Population

Clark County has the smallest population in the state at just 949 in 2011. Over the last decade the population has fluctuated. In 2003 it dropped slightly below 900 after peaking at over 1,000 in 2000 before the last recession. Clark County has just one person for every two square miles, severely limiting its labor force but also providing plenty of open space. Population may drop again with the loss of a North American Foods processing plant, which was previously one of the largest employers in the area.

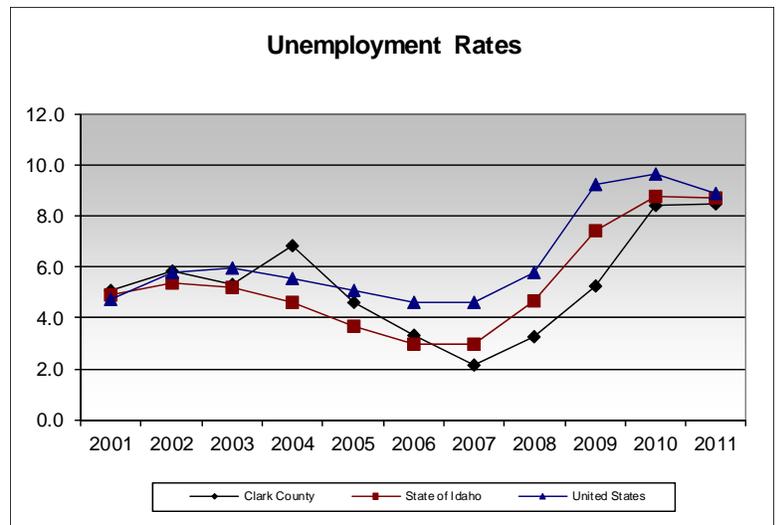

Clark County is highly dependent on agriculture, food manufacturing and government for its employment.

### Labor Force & Employment

With a small labor force and population, unemployment rates can fluctuate significantly. The 2011 unemployment rate at 8.5 percent remained below state and national levels. Unemployment in the agriculturally dependent county spiked from 2001 to 2005 because of water shortages. The county experienced a steady decline in its labor force from 1998 to 2002 before it began slowly rebounding. The population is aging as younger people are drawn away by urban education and employment.

Farming is the largest industry in the county. Over 66 percent of the land is owned by the federal government and another 7 percent by the state. The majority is considered rangeland, and sheep are a major commodity. A U.S. Department of Agriculture operates a research faculty which studies and develops new breeds of sheep. Among the other industrial sectors, manufacturing

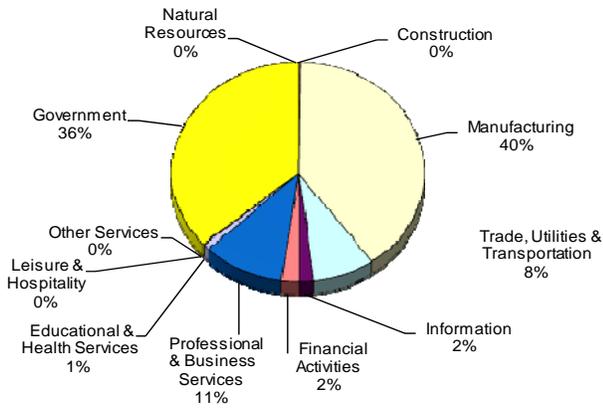

provides the most jobs at over 40 percent. Government, primarily the U.S. Department of Agriculture, is the second largest sector, employing 38 percent of workers.

The county is located on the Montana border and includes part of the Continental Divide. The city of Dubois is virtually the last place of refuge when winter storms intermittently cause closure of Interstate 15.

## Nonfarm Payroll Jobs for 2011

## Covered Employment & Wages

Covered employment increased by 2 percent, or 11 jobs, between 2001 and 2011, primarily in manufacturing. Average wages increased \$16,203, or 78 percent, during the decade. Between 2010 and 2011 wages among most sectors rose. It should be noted that these wages are counted where the job is located. Many of the jobs within the county are held by residents of other counties.

Covered employment includes jobs subject to state and federal unemployment insurance laws. These laws apply to approximately 92 percent of Idaho's employees.
