

Teton County

August 2012

Work Force Trends

Population

Between 2000 and 2011 Teton County has grown faster than any other county in the state. The population was up 57 percent from 6,455 to 10,166.

The county has attracted many second homeowners near the popular Wyoming tourist locations of Jackson Hole and Grand Targhee Ski Resort. Many employers and employees of Wyoming businesses commute from Teton County. With natural, pristine landscapes and close access to Jackson, Wyo., increases in population are expected to continue.

Declines in construction slowed growth in recent years. County residents are accustomed to harsh and long winters where they can be cut off for days from surrounding areas due to road closures.

Labor Force & Employment

Teton County has had one of the lowest unemployment rates in the state, dipping to 1.6 percent in 2007. The rate has been significantly below both the state and national rates since 1998. Much of the county's employment is seasonal and depends on tourism, but officials are working toward more year-round employment. The 2001 recession had a marginal effect compared to the current national recession, which has impacted the county to a much greater degree. But the county still has one of Idaho's lowest unemployment rates.

The five main industries are trade, leisure and hospitality, construction, professional and business services and government. State and local government jobs along with hospital and school employment make government the top employer. Trade, leisure and

hospitality depend on the local and national tourism market. With population growing so rapidly, residential and commercial construction had been heavy when weather permitted, but both have slowed with the onset of the recession. Many people commute from neighboring counties in Idaho for construction jobs in the area.

The pure tranquility and breathtaking beauty encourage growth with little or no marketing. Infrastructure and utilities are trying to keep pace with the influx of people.

Nonfarm Payroll Jobs for 2011

Covered Employment & Wages

Because so many Teton County residents commute to comparatively higher-paying jobs in Wyoming, the covered employment and wages for the county are essentially depressed since job and wage data are gathered at the place of work, not residence. Covered employment in Teton County decreased by 1.6 percent between 2010 and 2011. Construction is continuing to shed jobs with another 13 percent loss between 2010 and 2011—since 2007 construction employment has fallen by 62 percent.

Covered employment includes employers subject to state and federal unemployment insurance laws. These laws apply to approximately 92 percent of Idaho's employees.
